## MULTI-FUNCTIONAL INTERIOR

Moscow is the capital of Russia and one of the largest European cities. A city whose architecture distinguished by splendour and diversified form makes it stand out from other places. In one of the attic spaces in the centre of Moscow there is situated a living room different than any other as it is multi-functional where everyone can find something to enjoy.

Huge living room space has been divided into five zones: entertainment area, TV room, dressing room as well as secluded relaxation area located in the cube suspended in the central spot of the room, dividing it into functional zones.

Living room has been decorated in a minimalist form. **FAKRO roof windows type FTP-V and FDY-V Duet proSky are installed to ensure optimum ingress of natural light which is of significant importance for effective rest.** Windows are situated in different areas of the roof. In addition, some of the roof windows provide light for a tree growing inside the suspended cube.

The FDY-V Duet proSky roof windows mounted in the living room are double-sash windows, "closed" in a single frame and feature large dimensions. The bottom sash is non-opening and equipped with safe glazing unit, while the upper sash is opened like a pivot window with its axis of rotation situated above the centre of the window so everyone can easily walk up to the window edge. The Duet proSky roof window is also available in the size of 94x255cm and can be combined with the FGH-V Galeria balcony windows. Applying large-sized roof windows provides rooms with an abundance of natural light and makes them perfect place to relax.
