

## LXS-W STILE ENDS: COMPATIBILITY

Stile ends in a silver colour compatible with wooden loft ladders. They are an alternative to the LXS model, giving the option to adjust the length of the cut ladder. In addition, they protect the ladder stringers against damage. The rubber cover prevents the floor from scratching and increases the comfort of operating the loft ladder.

The maximum extension of stile ends depends on the room height (Fig. 1) and loft ladder size (for smaller box lengths, too extended stile ends will collide with the box, preventing the loft ladder from closing, Fig. 2).

Figure 1. Maximum room height

Figure 2. Swing space of the loft ladder equipped with the LXS-W stile ends

The tables below present the maximum room height that can be achieved by extending the ladder using the LXS-W stile ends. Models and sizes not included in the tables are not compatible with the LXS-W stile ends.

| <b>Model</b>                                   | <b>Hmax [cm]</b> |
